# Module 7: Payments & Operations

The final piece that turns your AI-powered brand into a **real, revenue-generating business** — accept money, support customers, and run operations like a pro.

3:50 – 4:40 PM

15 MIN DEMO · 25 MIN EXERCISE · 10 MIN REVIEW

What We Are Building

# Closing the Loop

This module completes your business. Three critical capabilities come together today — and for the first time, real money will land in your bank account during class.

### 💰 Accept Real Money

Receive UPI payments — today, in class, Rs. 10 from the person next to you.

### 🎧 Customer Support

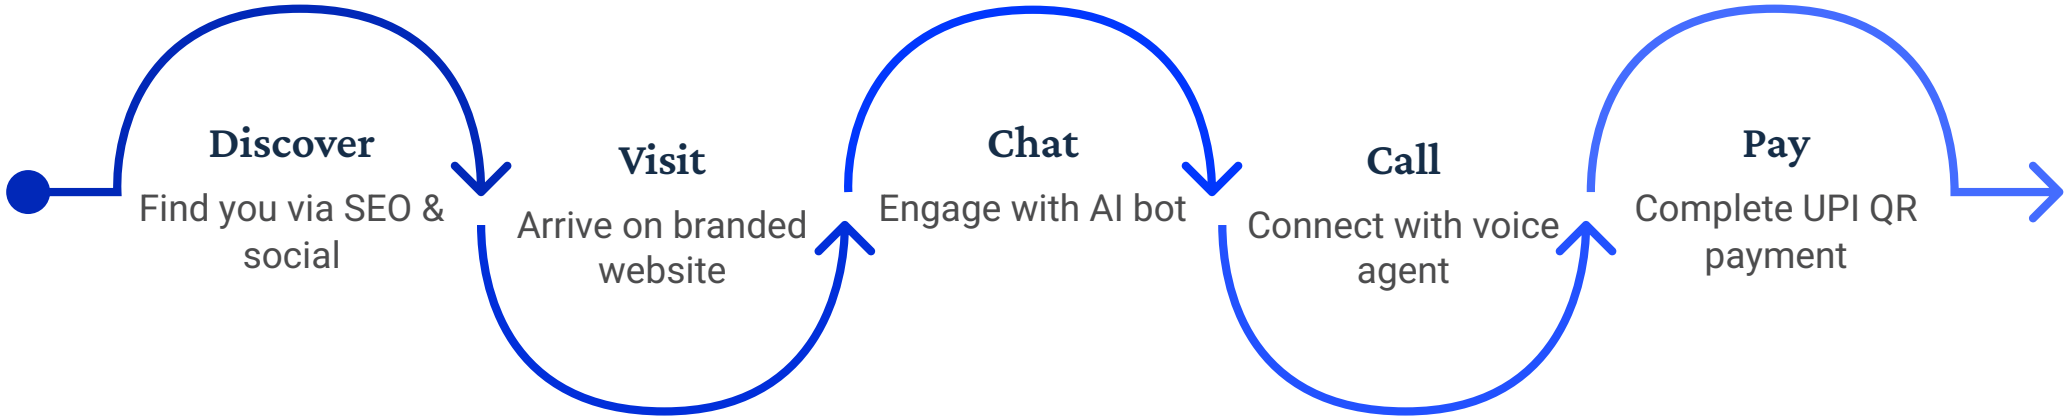
Set up post-sale AI support so customers feel taken care of, 24/7.

### 📋 Operations Docs

Create SOPs, onboarding guides, and scripts so your business runs without you.

# The Complete Business Loop

Every module you have built connects into a single, seamless, automated customer journey — from discovery to payment to support. This is what a real digital business looks like.



Every single step is automated, branded, and built entirely by you — today, in this room. **Module 7 is the final link that makes it a business.**

# How UPI QR Codes Work

Every Indian with a smartphone already has a UPI address. No setup needed on the customer side — they simply scan, enter an amount, and money lands in your bank **instantly, with zero fees**.

### Static QR

One fixed code. Customer enters the amount manually. Used by shops everywhere. **This is what we use today.** Free, instant, you already have it.

### Dynamic QR

Generated per transaction with a pre-filled amount. Ideal for e-commerce and invoices. Slightly more setup required.

### Payment Link

A URL that opens a UPI app directly. Share via WhatsApp, email, or SMS. No QR needed — customer taps the link.

⏱️ 3 Minutes — Everyone Does This Now

# Task: Get Your Static UPI QR Code

Open your UPI app, find your QR code, screenshot it, and send it to your laptop. Choose your app below:

### 1

#### Google Pay

Open app → Tap **profile picture** (top right) → Tap **QR Code** → Screenshot → Send to laptop

### 2

#### PhonePe

Open app → Tap **Receive Money** → QR appears with UPI ID → Screenshot → Send to laptop

### 3

#### BHIM

Open app → Tap **QR Code** (bottom menu) → Your QR appears → Screenshot → Send to laptop

### 4

#### Paytm

Open app → **Profile** (top left) → **My QR Code** → Screenshot → Send to laptop

ⓘ Instructor: Walk around. Help anyone stuck. Confirm: **"Does everyone have their QR screenshot on their laptop?"** before proceeding.

Instructor Demos Live First — Then Everyone Follows

# Task: Add Your UPI QR to Your Website

01

### Open osmAgent

Navigate to osmAgent and open your brand's website project.

02

### Enter This Exact Prompt

*"Add a payment section to my [BRAND NAME] website. Include: a heading Pay Securely via UPI, space for a QR code image with instruction Scan this QR code with any UPI app — Google Pay, PhonePe, BHIM, or Paytm, my UPI ID displayed as text [YOUR UPI ID], a note After payment send screenshot on WhatsApp at [YOUR NUMBER] for instant confirmation, place this on the services page near pricing."*

03

### Upload Your QR Code

Upload your screenshot to replace the placeholder image in the new payment section.

04

### Test on Your Phone

Visit your website on your phone. Scroll to the payment section. Can you see the QR? Ask a neighbor to scan it.

Instructor: Show your own website on the projector with the QR embedded. **Scan it live** to prove real payments work before the class exercise.

🎉 Highlight of the Day

# Live Exercise: Rs. 10 Test Payment — Your First Revenue

Pair up with your neighbor. You are about to complete a full, real customer journey — from website visit to money in the bank.

### Round 1 — You Pay Your Neighbor

1. Open their website URL on your phone
2. Find their UPI QR payment section
3. Scan their QR with your UPI app
4. Enter Rs. 10 and complete payment
5. Show them the confirmation screen
6. They confirm Rs. 10 received in their bank

### Round 2 — Your Neighbor Pays You

1. They open YOUR website on their phone
2. They find YOUR QR payment section
3. They scan YOUR QR code
4. They pay Rs. 10
5. You check your bank — Rs. 10 received?
6. **Congratulations. You just made your first sale.**

Instructor: Ask the room — **"How many of you just received Rs. 10?"** Celebrate this moment. It is the most tangible proof-of-concept of the entire program.

# Pricing Strategy: Three-Tier Architecture

Pricing is psychology. The three-tier model is proven to shift customer behavior — **Standard captures 60–70% of revenue** by design. Basic makes Standard look like great value. Premium makes Standard look affordable.

### Basic

**Rs. 799** — Bath, blow dry, nail trim, ear cleaning. Exists to anchor value and make Standard irresistible.

### ⭐ Standard — RECOMMENDED

**Rs. 1,499** — Everything in Basic, plus haircut, teeth cleaning, paw moisturizer, cologne. Captures 60–70% of buyers.

### Premium

**Rs. 2,499** — Everything in Standard, plus de-shedding, aromatherapy, photo session. Catches 10–15% who want the best.

osmAgent Prompt: *"Suggest optimal pricing for [YOUR SERVICES] based on Indian market rates. Create 3 tiers: Basic, Standard (recommended), Premium. For each: what is included, price in INR, why a customer would choose it."*

# Invoice & Payment Confirmation

Every payment deserves a professional paper trail and an instant confirmation message. These two automations make your business feel credible and trustworthy from day one.

### Professional Invoice Template

osmAgent Prompt:

*"Create a professional invoice template for [BRAND] with: logo and company details, GST number field, itemized service table, payment terms, UPI ID, bank transfer details, and a thank you message."*

### WhatsApp Auto-Confirmation

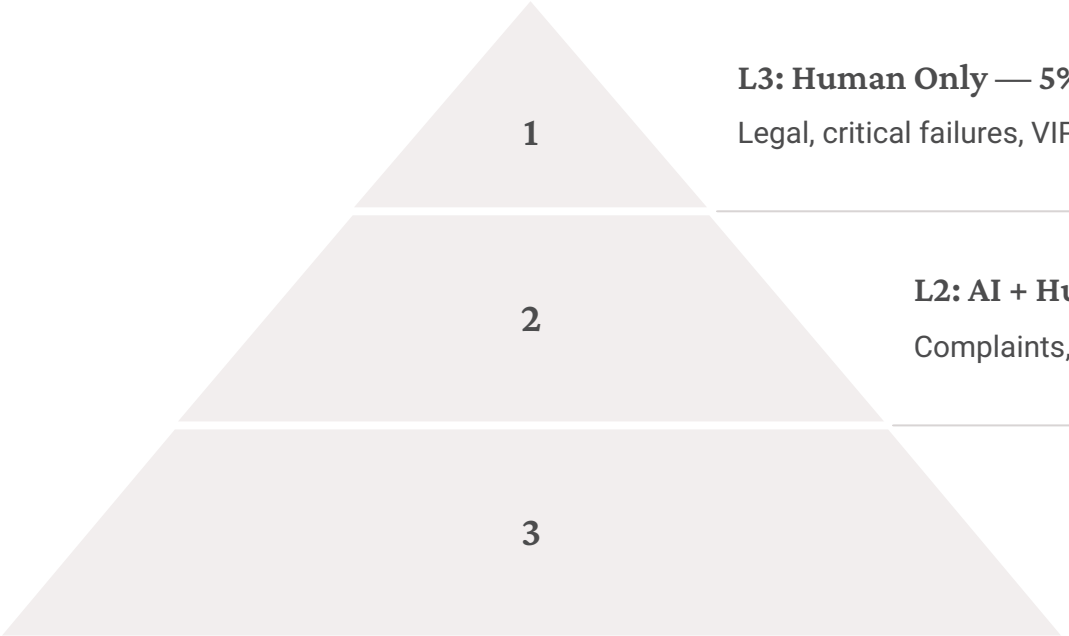
In osmTalk, set this auto-message to trigger on payment receipt:

*"Payment received! Thank you for choosing [Brand]. Your [service] is confirmed. We will send details shortly."*

This message fires instantly — customers feel confident and cared for before any human intervenes.

# Customer Support Escalation Model

Not every customer issue needs a human. A well-designed three-tier model handles **95% of queries at near-zero cost** while ensuring complex cases get the human attention they deserve.



### L3: Human Only — 5%

Legal, critical failures, VIP escalations

### L2: AI + Human — 15%

Complaints, refunds, complex issues. AI logs and flags for human review.

### L1: AI Handles — 80%

FAQs, order tracking, scheduling, payment status. Instant, 24/7, near-zero cost.

osmAgent Prompt: *"Create post-sale support content for [BRAND]: 10 post-purchase FAQs, a complaint handling script (acknowledge, apologize, gather details, resolve, follow up), and a feedback survey (1–5 rating, what they liked, what to improve, likelihood to recommend). Paste into osmTalk chatbot."*

# Operations Documents

A business that depends entirely on you is a job, not a business. Operations documents let anyone step in and deliver a consistent, professional experience — and they take under five minutes to generate with osmAgent.

### Employee Onboarding Guide

One-page overview of brand values, tools used, key processes, and first-day tasks.

### SOPs for Top 3 Services

Step-by-step standard operating procedures so every service delivery is consistent.

### Customer Service Scripts

Scripts for: new inquiry, lead follow-up, complaint handling, payment collection, and referral request.

osmAgent Prompt: *"Generate for [BRAND]: a 1-page employee onboarding guide, SOPs for my top 3 services, and customer service scripts for new inquiry, lead follow-up, complaint, payment collection, and referral request."*

Before You Submit — Run This Checklist

# End-to-End Test

Walk through your entire customer journey yourself — right now, on your own phone. If something feels broken, note it below and fix it before the review session.

- [ ] Website loads correctly on mobile
- [ ] Services and pricing are clear
- [ ] Chatbot responses are accurate
- [ ] CTA buttons work and link correctly
- [ ] UPI QR code is visible and scannable
- [ ] Voice agent answers and responds
- [ ] WhatsApp auto-reply fires correctly
- [ ] Entire journey feels like a real business

**Issues to fix:** _____

⚠ Do not skip this step. The end-to-end test catches gaps that individual module tests miss. A broken link at payment is a lost customer.

Review Session

# Self-Grade: Score Your Business /25

Instructor will select two participants to run a live full journey on the projector — including scanning the QR code and showing a real payment confirmation.

/5

### Payment Flow

QR visible, scannable, and live transaction confirmed

/5

### Support Bot

Post-sale FAQs loaded and chatbot responds accurately

/5

### Voice Support

Voice agent handles post-sale queries appropriately

/5

### Ops Docs

Onboarding guide, SOPs, and scripts generated and saved

/5

### End-to-End

Full customer journey is seamless, professional, and unbroken

# The Economics: What You Just Built

Let's put into perspective what seven modules have produced. The business you now own would have cost significant capital to build through traditional means.

### Traditional Year-One Cost

**Rs. 5–20 Lakhs**

Agency fees, developer costs, CRM setup, support staff, operations consultant

### Your Monthly Cost

**Rs. 20–50K / month**

AI tools subscription, hosting, minimal maintenance — fully controlled by you

### Already Earned Today

**Rs. 10**

Real money. Real bank account. Real customer journey. The first of many.

🎓 All 7 Modules Complete

# You Built a Real Business Today

From zero to a fully operational, AI-powered, revenue-generating business — in a single program. Here is what you now own:

### Finds Customers

SEO, social presence, and discoverability — built in Module 6.

### Engages and Sells

Branded website, AI chatbot, and voice agent — Modules 3, 4, 5.

### Collects Real Money

UPI QR embedded in your website — live and proven today.

### Provides Support

Three-tier escalation with AI handling 80% automatically — Module 7.

# What's Next: Closing

You have completed the build. The next session focuses on taking what you have made and turning it into consistent, growing revenue. Be ready to share your business URL and your first Rs. 10 story.

### Before the Next Session

Run your full end-to-end test one more time. Fix any issues flagged during self-grading. Make sure your QR code is live and scannable from your website.

### Come Ready With

Your business URL, your self-grade score /25, and one thing you would do differently if you started Module 1 again today.

### The Bigger Picture

You did not just learn tools. You developed the judgment to identify a customer problem, build a branded solution, and get paid — with AI as your co-founder. **That is a durable, compounding skill.**

Congratulations on completing Module 7 and all 7 modules. You received your first revenue today. **Next: Closing Session.**
