Module 5: The Voice of Your Business

Build three AI voice agents in 50 minutes — inbound customer support, outbound recruiting, and WhatsApp automation — using osmTalk.

2:00 – 2:50 PM

50-MINUTE SESSION

SESSION ROADMAP

What We'll Cover Today

1

🎙️ **Live Demo**

Watch a real AI answer a live phone call — in two languages

2

🏗️ **Deep Dives**

Step-by-step build of all three agents

3

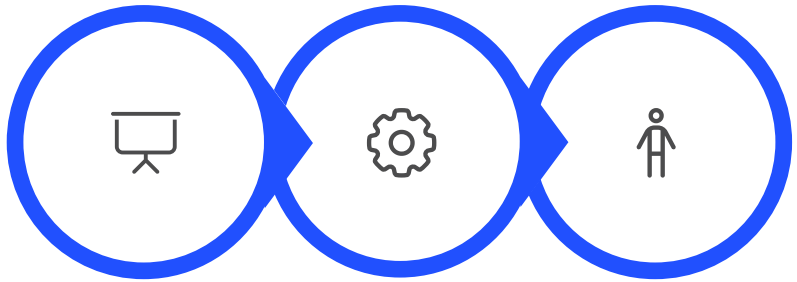
⚡ **25-Min Build**

You build, test, and call your live AI agent

4

📊 **Evaluate**

Peer testing and rubric scoring



Instruction **Build Exercise** **Peer Evaluation**

Your Phone Is About to Ring

The instructor dials the osmTalk voice agent live on speakerphone. The room hears an AI answer, hold a full conversation, book an appointment — then seamlessly switch to Hindi mid-call.

10K

Concurrent Calls

Handled simultaneously

24/7

Always On

365 days, zero downtime

70+

Languages

Including regional dialects

0

Sick Days

Zero attrition, ever

THREE AGENTS

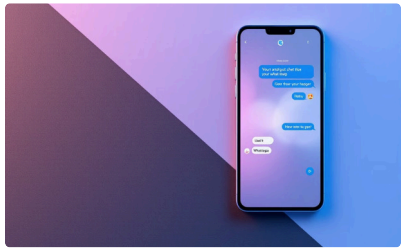
What You'll Build Today

Agent 1 — Customer Inbound

Greets callers, answers questions, books appointments, handles complaints, and transfers to a human when needed.

Agent 2 — Outbound Recruiter

Calls candidates, runs 5-question screenings, and auto-scores applicants on a 10-point scale.

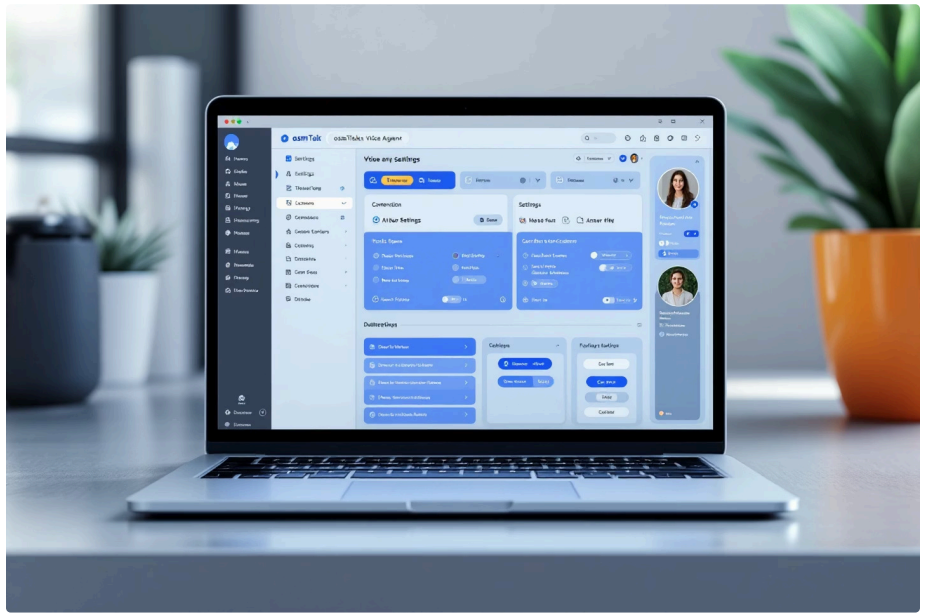


Agent 3 — WhatsApp Bot

Auto-greets, answers FAQs, nurtures leads over 7 days, and hands off complex issues to a human.

AGENT 1 — DEEP DIVE

Building the Customer Voice Agent



Configuration Steps in osmTalk

1. **Voice selection** — audition samples, match your brand personality
2. **Languages** — English + Hindi + your regional language
3. **Greeting script** — *"Thank you for calling [Brand]. I am [Agent Name], your AI assistant. How can I help?"*
4. **Five call scenarios** — inquiry, pricing, booking, complaints, location/hours
5. **Escalation rule** — transfer to your personal number after 2 failed attempts

AGENT 1 — CALL SCENARIOS

Five Scenarios Your Agent Handles

1	**Service Inquiry** Describes relevant services from your knowledge base
2	**Pricing Question** Shares pricing tiers; offers free consultation for custom quotes
3	**Appointment Booking** Collects name, date/time, service needed — then confirms
4	**Complaint Handling** Acknowledges, apologizes, logs details, promises callback within 24 hours
5	**Location / Hours** Shares address or *"We operate online, available 24/7"*

Escalation Trigger: If caller says "speak to a human" or agent fails after 2 attempts → transfer to your personal phone number immediately.

AGENT 2 — DEEP DIVE

Building the Recruiter Agent

Outbound Call Script Structure

Opening

"Hi [Candidate Name], calling from [Brand] about your [Position] application. Do you have 5 minutes?"

5 Screening Questions

Experience → Motivation → Availability → Salary → Their Questions

Closing

"Thank you. We'll review your responses and get back to you within 3 business days."

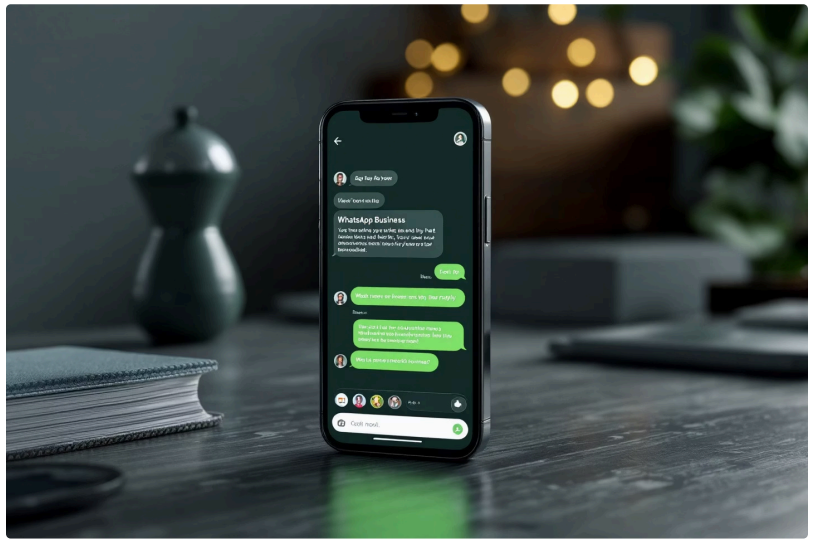
Auto-Scoring Rubric (10 Points)

Criteria	Max Score
Experience	3 pts
Motivation	2 pts
Availability	2 pts
Salary Fit	2 pts
Engagement	1 pt

Candidates are automatically ranked by score — no manual review required.

AGENT 3 — DEEP DIVE

Building the WhatsApp Agent



Setup in osmTalk

1. Connect your **WhatsApp Business** number
2. Set **auto-greeting** for every new conversation
3. Configure **FAQ responses** from your knowledge base
4. Build **lead nurture sequences** — Day 1, Day 3, Day 7 follow-ups
5. Enable **human handoff** for complex queries

The Day 1 → Day 3 → Day 7 nurture sequence converts cold leads into paying customers — automatically.

Exercise: Build Your Voice AI Suite

25 minutes. Four parts. By the end, your AI agent will answer a live call from your neighbor.

Part A — 8 min

Customer Voice Agent: create, configure 5 scenarios, test by calling from your phone

Part B — 8 min

Recruiter Agent: write script, set 5 questions, configure scoring, enable recording

Part C — 5 min

WhatsApp: connect Business number, set auto-greet, configure FAQs, test message

Part D — 4 min

Peer Testing: exchange numbers, call each other's agents, give honest feedback

PEER TESTING PROTOCOL

How to Test Each Other's Agents

1 They Call Yours

Your neighbor calls your customer voice agent. You listen. Take notes on what sounds natural — and what doesn't.

2 You Call Theirs

Be a real, demanding customer. Ask tough questions. Try to confuse the AI. That's how you find gaps.

3 Give Honest Feedback

If their agent sounds better than yours — ask what they did differently. That's the fastest way to improve.

⚠ Be a difficult caller — vague questions, mid-sentence language switches, complaints. If the AI handles it, you're ready.

EVALUATION

Scoring Rubric — Rate Each Agent 1 to 5

#	Evaluation Criteria	Max	Your Score
1	Professional and natural greeting	5	__ / 5
2	Handles customer inquiries effectively	5	__ / 5
3	Captures caller information correctly	5	__ / 5
4	Multilingual readiness (at least 2 languages)	5	__ / 5
5	Recruiting script is thorough and professional	5	__ / 5
	Total Score	**25**	**__ / 25**

A score of **20 or above** means your AI suite is ready for real-world deployment.

You Now Own a 24/7 Call Center

📞 Customer Agent

Answers every inbound call. Books appointments. Handles complaints. Never misses a caller.

🎯 Recruiter Agent

Screens candidates at scale. Auto-scores on 10 points. Sends ranked shortlists — no HR effort needed.

💬 WhatsApp Bot

Nurtures leads over 7 days. Converts conversations into customers. Works while you sleep.

> Three agents. One workforce. Built in 25 minutes. Costs less than one employee's monthly salary.
