Module 1: Find Your Idea

Your first 45 minutes — from blank page to validated business concept. This session combines a live instructor demo, a structured AI-powered exercise, and a peer review to help every participant walk away with a real, scored business idea worth building.

10:00 – 10:45 AM

15 MIN DEMO · 20 MIN EXERCISE · 10 MIN REVIEW

Session Agenda at a Glance

Three tightly sequenced blocks ensure every participant finishes with a validated, AI-ready business idea — not just inspiration.

Live Demo

Instructor walks through a real idea using osmAgent — you watch the AI build a blueprint in real time.

15 minutes

Hands-On Exercise

Pick your idea, write your one-sentence pitch, and generate your full business blueprint with AI.

20 minutes

Peer Review

Score each other's ideas using a structured 5-criterion rubric. Receive and give actionable feedback.

10 minutes

The 5-Point Agent-Creatable Test

Not every business idea is equally suited for AI-powered execution. Before investing time in a concept, validate it against these five criteria. **Score 4 out of 5 to proceed.** This filter ensures your idea can be built, marketed, paid for, supported, and operated with minimal human overhead — the foundation of a lean AI-native business.

Digital Delivery

The product or service can be delivered entirely online — no physical fulfillment required.

Digital Acquisition

Customers can be reached and converted through digital channels — ads, SEO, social, or referral.

Online Payments

The entire payment cycle — invoicing, collection, and reconciliation — happens digitally.

AI Support

Customer queries, onboarding, and routine support can be automated with AI agents.

Lean Ops

Core operations require a small team or a solo founder — no large headcount to launch.

The Idea Gallery: Purely Online Businesses

These 14 categories are fully digital — no physical premises, no inventory. Each passes the 5-point test with flying colors and is ideal for a first AI-native venture.

- AI Tutoring
- Fitness Coaching
- Legal Consultation
- Marketing Agency
- Travel Concierge
- Career Coaching
- Bookkeeping
- Content Agency
- Translation
- E-Commerce
- SaaS Tool
- Therapy Matching
- Stock Research
- Staffing

The Idea Gallery: Online + Offline Businesses

These hybrid businesses have a physical component — a location, a technician, a practitioner — but the *intelligence layer* (booking, support, marketing, billing) can be fully AI-powered. They typically score 3–4 on the agent-creatable test and are strong candidates if you have domain expertise or local market knowledge.

Home Services

Plumbing, electrical, cleaning — AI handles booking and dispatch.

Real Estate

Lead gen, listings, and client follow-ups automated end-to-end.

Health Clinic

Appointment scheduling, reminders, and intake forms go fully digital.

Restaurant

Online ordering, loyalty programs, and inventory managed by AI.

Salon

Booking bots, review management, and upsell campaigns automated.

Pet Care

Grooming appointments, vaccination reminders, and pet profiles managed digitally.

Naming Your Business: Real Examples

A strong name is memorable, category-relevant, and domain-friendly. Here are AI-generated name options across three industries — notice how each name signals the value proposition instantly. Use these as inspiration, not templates.

🐾 Pet Grooming

- PawPalace
- FurFresh
- GroomBuddy
- PetGlow
- WagWash

📚 Tutoring

- BrainSpark
- LearnLane
- TutorNest
- AceMind
- ClassPilot

🔧 Home Services

- FixItNow
- HomeHero
- RepairRaja
- QuickFix Pro

Each name works because it is **short**, **action-oriented**, and immediately communicates what the business does. Your AI agent can generate 20+ name options in seconds — pick the one that feels authentic to your brand.

ⓘ Tip: Ask osmAgent to check domain availability for your top 3 names.

Live Demo: Instructor Walkthrough

The instructor selects a participant's idea from the room and builds a complete business blueprint live — using osmAgent. You will see, in real time, how AI transforms a single sentence into a structured, investor-ready concept.

01

Select a Participant Idea

Instructor calls for a volunteer concept from the audience — any industry, any stage.

02

Type the Blueprint Prompt

Instructor enters the full structured prompt into osmAgent on the projected screen.

03

Review the AI Output Live

The group reads the generated blueprint together and discusses what to refine or probe further.

Exercise Overview: 20 Minutes, 3 Steps

This is the core hands-on block of Module 1. Work independently. Each step has a strict time box — follow it precisely to finish with a complete, scored business blueprint before the review begins.

1

Step 1 — 5 min

Pick your business idea and write exactly one sentence describing what it does and who it serves.

2

Step 2 — 10 min

Enter the full osmAgent blueprint prompt. Read the output carefully and note what surprises you.

3

Step 3 — 5 min

Run the follow-up prompt for competitive intelligence, market size, differentiators, and risk factors.

Step 1: Pick Your Idea (5 Minutes)

The goal is clarity, not perfection. Choose one idea you are genuinely curious about — from the gallery, from your own experience, or something completely original. Then write one precise sentence.

Your Task

Write one sentence using this structure:

> "I want to build a **[BUSINESS TYPE]** that helps **[TARGET CUSTOMER]** to **[ACHIEVE OUTCOME]**."

Examples

- "I want to build an AI tutoring platform that helps Class 10–12 students in Tier 2 cities prepare for competitive exams."
- "I want to build a home services marketplace that helps busy urban families get reliable plumbers and electricians on demand."
- "I want to build a bookkeeping service that helps Indian freelancers manage GST compliance without hiring a CA."

Step 2: The Blueprint Prompt (10 Minutes)

Copy this prompt exactly into osmAgent. Replace the bracketed fields with your idea. Do not paraphrase — the structure of the prompt is designed to extract a complete, structured blueprint in a single pass.

Type this prompt exactly into osmAgent — word for word:

> "I want to start a **[IDEA]** business targeting **[AUDIENCE]** in India. Please create: (1) a business description, (2) a detailed customer profile, (3) five specific services with INR pricing, (4) a revenue model, and (5) an explanation of why this business is perfectly suited for AI-powered operations."

While the output generates, read each section carefully. Note any service you would change, any pricing that feels off, or any customer insight that surprises you. These observations will fuel your follow-up prompt in Step 3.

Step 3: The Follow-Up Prompt (5 Minutes)

Your blueprint is only as strong as your market understanding. This second prompt sharpens your idea by surfacing competitive threats, sizing the opportunity, and identifying your defensible edge — all critical inputs for the peer review rubric.

Immediately after Step 2, type this follow-up prompt into the same osmAgent session:

> "Now give me: (1) top 3 direct competitors in India with their weaknesses, (2) estimated market size and growth rate, (3) three differentiators that make my version better, and (4) the top two risks I should plan for."

Competitors

Know who you are fighting — and where they are weak.

Market Size

Quantify the opportunity to make the case for investment.

Differentiators

Articulate your unfair advantage in one clear line.

Risk Factors

Anticipate objections before reviewers raise them.

Peer Review Rubric: Scored /25

Use this rubric to score a partner's blueprint during the 10-minute review. Each criterion is scored 1–5. Be specific in your feedback — vague comments like "good idea" do not help anyone improve. A score of 20+ indicates a market-ready concept worth taking into Module 2.

Criterion	What to Evaluate	Score (1–5)
Problem Clarity	Is the pain point real, specific, and painful enough to pay to solve?	__ / 5
Customer Definition	Is the target customer precisely described — demographics, behavior, context?	__ / 5
Revenue Model	Is there a clear, believable path to ₹ revenue from day one?	__ / 5
Agent-Creatable	Can AI handle delivery, support, and ops? Does it score 4/5 on the test?	__ / 5
Differentiation	Is there a defensible edge over existing competitors in the market?	__ / 5
Total	**20+ = Ready for Module 2 · Below 15 = Revisit the idea**	**__ / 25**
