Module 3: Build Your Website

Transform your business idea into a live, professional website — in under 45 minutes. In this module, you will watch a full build live, then construct and deploy your own site using osmAgent.

11:45 – 12:30 | 15 MIN DEMO | 20 MIN EXERCISE | 10 MIN REVIEW

Module Roadmap

Three tightly sequenced phases move you from concept to live URL in one session.

Live Demo

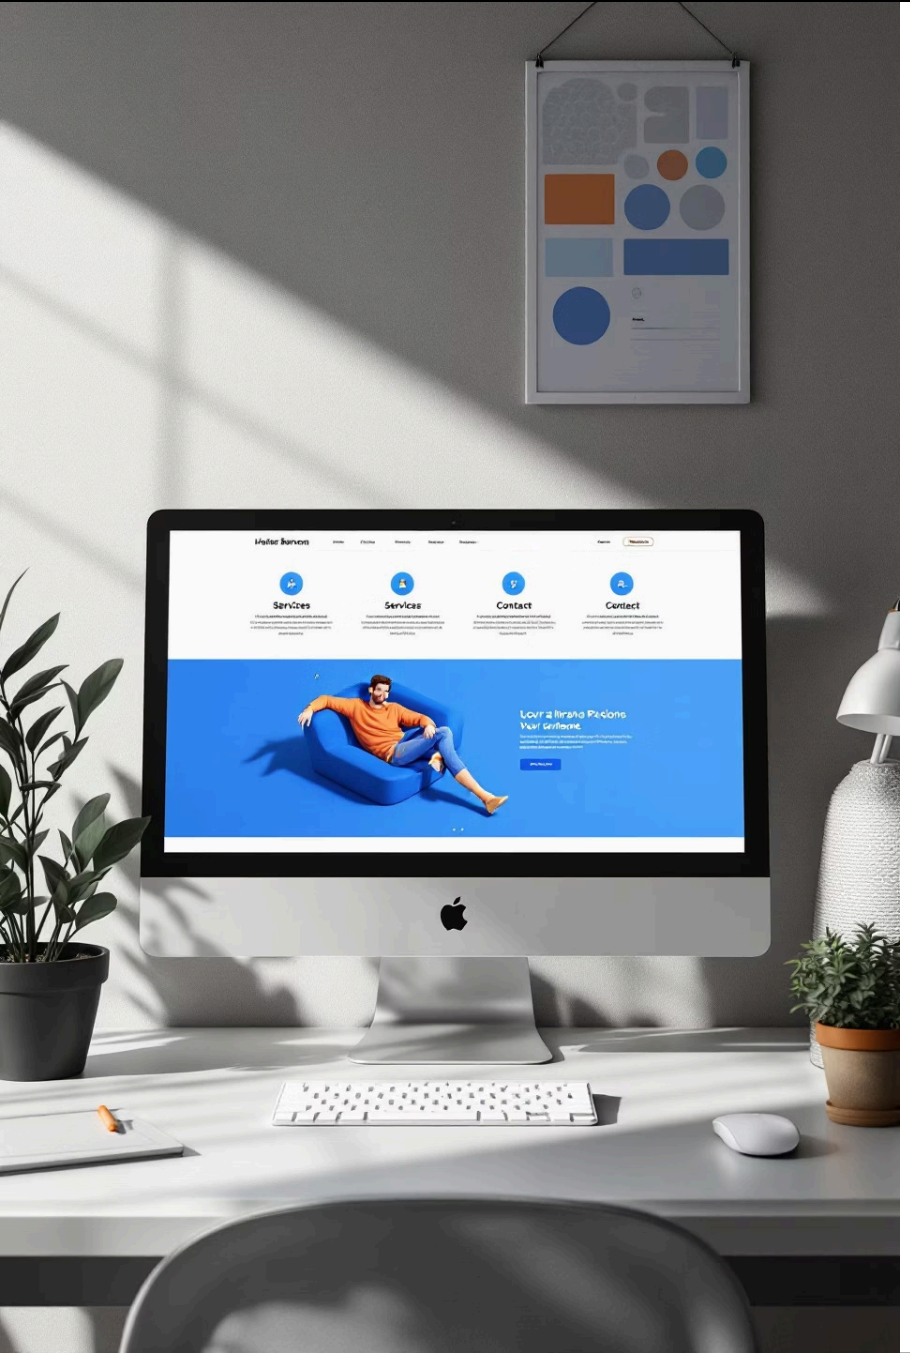
Watch instructor build and deploy a complete site in real time — 15 min

Your Exercise

Build, refine, add SEO, and deploy your own site — 20 min

Group Review

Score your site on the /25 rubric, share feedback — 10 min



Website Anatomy: What Every Page Needs

A high-converting business website follows a proven structure. Every section has a job — and every page ends with a call to action.

🏆 Hero + CTA *(Above the Fold)*

Your boldest headline and a single, unmissable call-to-action button. Visitors decide to stay or leave here.

✅ 3 Core Benefits

Short, punchy statements that answer: *"Why you? Why now?"* Focus on outcomes, not features.

💼 Services + Pricing

Clear service descriptions with transparent pricing remove hesitation and accelerate purchase decisions.

⭐ Testimonials, About & Contact

Social proof, your story, and an easy path to reach you. Close every section with a CTA to maintain momentum.

Live Demo: Watch the Full Build

Duration: 15 minutes. The instructor will build a complete website for a demo brand inside osmAgent — from blank canvas to live URL — in real time. Pay close attention to the prompting strategy and deployment steps.

01

Open osmAgent

Start a new project for the demo brand. Select website mode.

02

Enter the Build Prompt

Single structured prompt covering all sections: hero, benefits, services, pricing, testimonials, about, contact.

03

Review & Adjust

Scan each section live — headline clarity, pricing accuracy, CTA placement. Make targeted edits.

04

Deploy & Share URL

Hit deploy. The live URL appears instantly. Instructor opens it on a phone — you will do the same.

Watch for how the instructor structures the initial prompt. The quality of the first prompt determines 80% of the result.

Your Exercise: 20 Minutes to a Live Site

Four timed steps. Work independently. Follow the exact prompts below — no improvisation needed.

1

Step 1 — 3 min

Initial Build Prompt

2

Step 2 — 7 min

Review & Refine

3

Step 3 — 5 min

Add SEO & Blog

4

Step 4 — 5 min

Deploy & Share

STEP 1 · 3 MINUTES

Initial Build: The Master Prompt

Open osmAgent and enter the following prompt exactly as written, substituting your business name and brand colors.

> "Build a website for **[YOUR BUSINESS NAME]** with the following sections: a hero section with a compelling headline and a clear call-to-action button; three key benefits; a services section with pricing for each offering; an about section; customer testimonials; and a contact form. Use our brand colors throughout. End every section with a CTA."

Replace **[YOUR BUSINESS NAME]** with your actual brand. Specify your primary and secondary brand colors by name or hex code for best results.

STEP 2 · 7 MINUTES

Review & Refine: Four Focus Areas

Read every section top to bottom. Use targeted follow-up prompts for each area that needs sharpening. Be specific — vague prompts produce vague results.

Headline

Is it outcome-focused? Does it speak directly to your customer's problem?

Services

Are all offerings listed accurately? Are descriptions clear to a non-expert?

Pricing

Is pricing correct and formatted consistently? Remove placeholders.

Contact

Does the form include name, email, message? Is your phone/address present?

STEP 3 · 5 MINUTES

Add SEO, Keywords & Blog Posts

Search visibility is built in — not bolted on. Use this exact prompt to add professional SEO infrastructure to your site in one step.

> "Add SEO meta tags to every page of this website, including a title tag and meta description. Generate a list of **10 relevant keywords** for my business and embed them naturally throughout the content. Then create **3 blog posts** relevant to my industry — each with a headline, 150-word body, and a closing CTA linking back to the services page."

Why SEO Matters

Meta tags tell search engines what your site is about. Keywords help the right customers find you. Blog posts build authority and drive organic traffic over time.

What Gets Generated

- Title tags and meta descriptions for each page
- 10 targeted keywords embedded in copy
- 3 full blog posts with CTAs

STEP 4 · 5 MINUTES

Deploy, Test & Share

Your site is ready. Follow these four steps to go live and share your URL with the room.

1 Hit Deploy

Click the **Deploy** button in osmAgent. Wait for the confirmation message — this takes under 60 seconds.

2 Copy Your Live URL

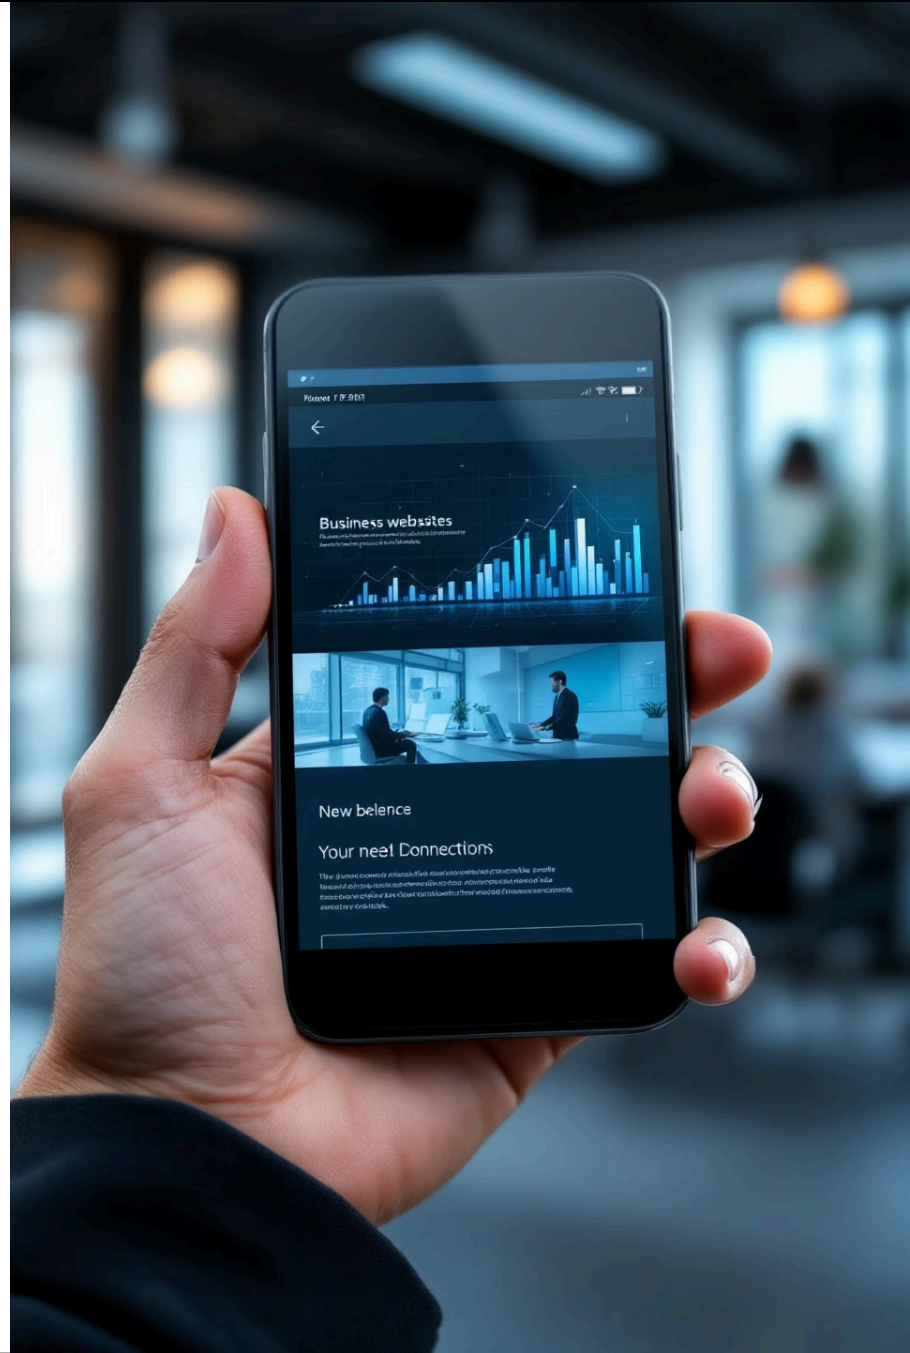
Your unique URL will appear. Copy it and save it somewhere accessible (notes app, email to yourself).

3 Open on Your Phone

Test the mobile experience. Scroll through every section. Tap the CTA button. Verify the contact form works.

4 Share with Your Neighbor

Exchange URLs with the person next to you. Give one piece of specific, positive feedback on their site.



Review Rubric: Score Your Site /25

Use this rubric to self-assess before the group debrief. Be honest — this score helps you identify exactly where to improve after the workshop.

5

Value Proposition

Is the hero headline clear, outcome-focused, and compelling within 5 seconds?

5

Design

Brand colors applied, layout clean, images relevant, typography consistent?

5

Services

All offerings listed accurately with clear descriptions and correct pricing?

5

CTA

Every section ends with a visible, action-oriented call-to-action button?

5

Mobile

Site renders cleanly on phone — no broken layouts, readable text, tappable buttons?

A score of **20+** means your site is ready to share with real customers. Anything below 15 — identify your lowest-scoring area and address it first in your post-workshop sprint.
