
Module 4: Deploy Your AI Chatbot

12:30–1:00 PM | 10 min demo · 15 min exercise · 5 min review

MODULE 4 OF 4

3:47 AM

The Problem That Costs You Customers

Without a Chatbot

A potential customer lands on your website at 3:47 AM. They have a question about pricing. No one answers. They move on to your competitor — and they never come back.

Result: Lost booking. Lost revenue. Lost relationship.

With osmTalk

Your AI chatbot responds **instantly** — answers their question, guides them through your services, and closes the booking right then and there. While you sleep.

Result: Customer booked. Payment collected. Problem solved.

40% of all customer inquiries arrive outside of business hours. Without automation, those are leads you are permanently leaving on the table.

What We're Building Today

In the next 30 minutes, you will go from zero to a fully deployed, branded AI chatbot — live on your website and ready to handle real customer questions.

1

Create Agent in osmTalk

Set up your chatbot's identity and core behavior

2

Generate FAQs in osmAgent

AI-written answers tailored to your brand

3

Build Knowledge Base

Feed it your services, pricing, and brand voice

4

Customize & Embed

Brand colors, widget style, live on your site

Live Demo: Watch First, Then Build

Follow along as we walk through the full setup end-to-end in osmTalk. Pay close attention — you'll replicate every step in the exercise that follows.

1	**Create Agent** Open osmTalk → New Agent. Name your bot and set the primary language and tone.
2	**Generate FAQs** Switch to osmAgent. Use the prompt to auto-generate 15 brand-specific FAQs in seconds.
3	**Build Knowledge Base** Paste FAQs, services list, and pricing. Set a warm, on-brand greeting message.
4	**Customize Widget** Apply your brand colors, choose icon style, and preview the chat bubble.
5	**Embed & Test Live** Copy the embed code to your website. Fire 4 test questions. Watch it work in real time.

EXERCISE — 15 MINUTES

Your Turn: Build It Yourself

Execute each step in sequence. Time allocations are strict — move to the next step when called, even if you're not 100% finished. You can polish later.

1

Step 1 — 2 min

osmTalk → Create Agent

Open osmTalk. Click "New Agent." Give it your brand name.

2

Step 2 — 3 min

osmAgent → Generate FAQs

Use exact prompt: *"Generate 15 FAQs for [YOUR BRAND]"*

3

Step 3 — 4 min

Build Knowledge Base

Paste FAQs + services + pricing. Write your greeting message.

4

Step 4 — 3 min

Customize Widget

Set your brand colors. Choose your chat bubble style.

5

Step 5 — 3 min

Embed & Test

Copy embed code → paste into site. Ask it 4 real questions.

Exact Prompts to Use — No Improvisation Needed

Copy these prompts word-for-word into osmAgent. Replace only the bracketed placeholders with your actual brand information.

FAQ Generation Prompt

*"Generate 15 FAQs for **[BRAND NAME]**, a **[TYPE OF BUSINESS]**. Include questions about pricing, availability, booking process, and common customer concerns. Write answers in a friendly, professional tone."*

Greeting Message Prompt

*"Write a warm welcome message for a chatbot representing **[BRAND NAME]**. Keep it under 2 sentences. Offer to help with bookings, pricing, and questions."*

Test Questions to Ask Your Bot

1. "What are your prices?" 2. "Are you available this weekend?" 3. "How do I book?" 4. Ask something it *shouldn't* know — and see how it handles it.

Review Rubric: How We Score Your Chatbot

After the exercise, we'll do a rapid peer review. Each chatbot is evaluated on four dimensions for a total score of **20 points**. Aim for full marks on all four.

5

Greeting

Is the opening message warm, on-brand, and clear about what the bot can help with?

5

Accuracy

Does the bot correctly answer questions about your services, pricing, and booking process?

5

Unknowns

Does the bot gracefully handle questions outside its knowledge — without making things up?

5

Voice

Does the bot sound like your brand — consistent tone, vocabulary, and personality throughout?

Full marks = a chatbot that could go live on a real business today. That's the standard we're aiming for.

Stop and Appreciate What You've Built

In 3 Hours, You Have:

- A validated business **idea** with market positioning
- A complete **brand** — name, logo, voice, and identity
- A professional **website** live on the internet
- An AI **chatbot** deployed and handling real inquiries

The Comparison

Most startups spend **3 months** getting to this point — and most never finish.

You did it in a single morning workshop.

This is what AI-powered execution looks like.

MODULES 1–4 COMPLETE ✓

Lunch Break — 1 Hour

You've earned it. But this isn't just a break — it's your first real user test. Use this hour intentionally.

Visit Each Other's Websites

Browse the sites built by your fellow participants. Experience them as a real customer would — first impressions, clarity, and professionalism all count.

Chat With Each Other's Bots

Ask at least 4 questions to someone else's chatbot. Note what works, what feels off, and what you'd improve. You'll be scored by your peers — and you'll score them.

Give Honest Feedback

Use the 4-point rubric: Greeting, Accuracy, Unknowns, Voice. Constructive feedback now will help everyone sharpen their bots before the afternoon session.

Morning Complete — What's Next

Modules 1 through 4 are done. You've moved faster than most funded startups. The afternoon builds on everything you've created this morning.

✓ Module 1

Business Idea & Market Positioning

✓ Module 2

Brand Identity & Visual Design

✓ Module 3

Website — Live on the Internet

✓ Module 4

AI Chatbot — Deployed & Tested

Back at 2:00 PM sharp. Afternoon modules focus on growth, automation, and scaling — building on the foundation you've already launched.
