Module 7: Payments & Operations

Closing the full business loop — from discovery to payment to post-sale support. This is where your AI-powered business becomes fully operational.

TIME: 3:50–4:40 PM

50 MIN TOTAL

The Full Business Loop

Every module has built one piece of the customer journey. Module 7 closes the final arc — connecting payments, support, and operations into a seamless, end-to-end experience.

Support
Module 7

Modules 1–6 built the pipeline. Today, you activate the revenue engine and the operational backbone that keeps customers coming back.

Session Agenda

A tightly structured 50-minute session with four distinct activities. Every minute is accounted for — follow the timing to complete the full end-to-end test.

1

Demo

15 min — Instructor walkthrough of payments, support escalation, and ops setup

2

Exercise

25 min — Hands-on build across 4 steps: Payments, Support, Ops, and E2E Test

3

Review

10 min — Rubric scoring, peer review, and instructor feedback on all 5 dimensions

Real Pricing in Action: PawPalace

A live example — three service tiers for a pet grooming business. This is the exact pricing architecture you will replicate for your own business during the exercise.

PawPalace: Three-Tier Pricing Model

Tiered pricing anchors value, drives upsells, and signals quality. The Standard tier is highlighted as the recommended option — a proven technique to increase average order value by 30–40%.

Basic

Fresh & Clean

Rs 799

- Bath & dry
- Basic brush-out
- Nail trim

⭐ Standard

The Full Groom

Rs 1,499

- Everything in Basic
- Breed-specific cut
- Ear cleaning & cologne

Premium

Spa Royale

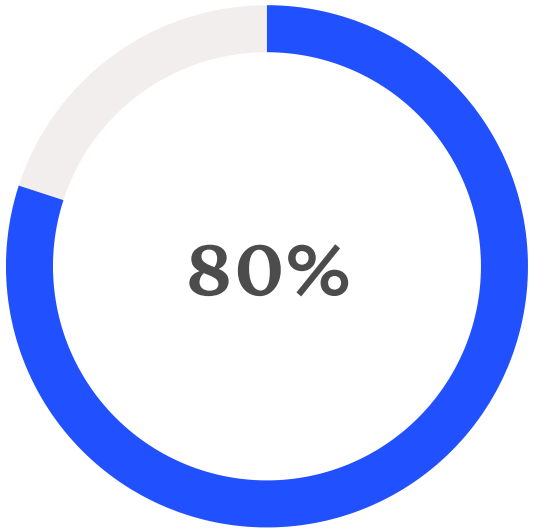
Rs 2,499

- Everything in Standard
- De-shedding treatment
- Paw massage & teeth brush

ⓘ The **Standard tier** is marked RECOMMENDED. This nudge alone can shift 60–70% of customers to the mid-tier — boosting revenue without adding cost.

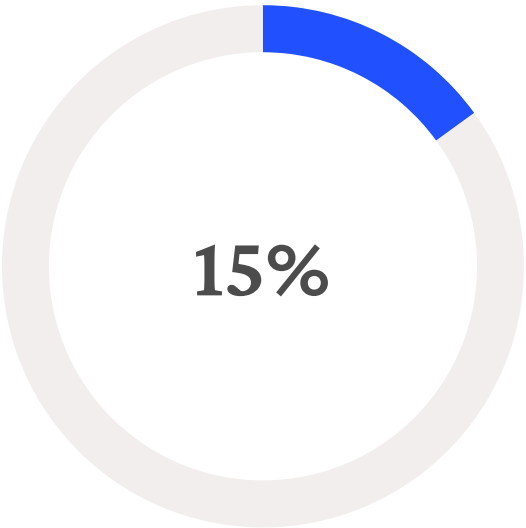
Support Escalation: The 3-Level Model

Not every issue requires a human. A well-designed escalation model routes 80% of queries to AI — keeping costs low while reserving human expertise for high-stakes situations.



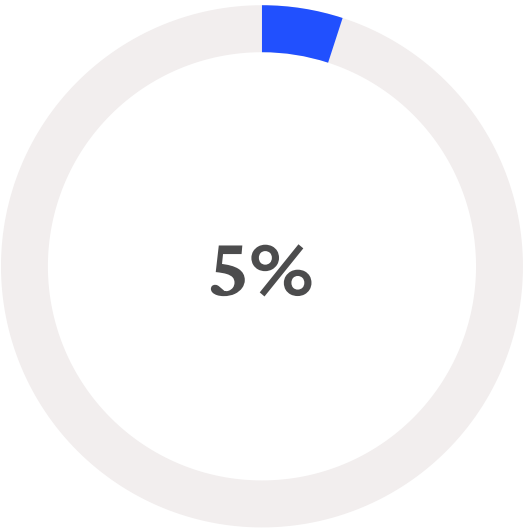
L1 — AI Only

FAQs, order tracking, scheduling changes. Fully automated, instant response, 24/7.



L2 — AI + Human

Complaints, refunds, and sensitive issues. AI drafts the response; human reviews and sends.



L3 — Human Only

Legal matters, critical escalations, and VIP clients. Full human ownership, priority SLA.

Exercise Overview: 25 Minutes to a Live Business

Four timed steps. At the end, your business will accept payments, handle support, run operations — and you will have tested the entire flow yourself.

25 MIN HANDS-ON

4 STEPS

Step 1 — Payments (7 Minutes)

Set up the complete payment infrastructure: a UPI collection link, a professional invoice, a three-tier pricing page, and an automated WhatsApp confirmation message.

01

UPI Payment Link

Generate your UPI collection link. Prompt: *"Create a UPI payment link setup guide for [Business Name] accepting payments via GPay, PhonePe, and Paytm."*

02

Invoice Template

Prompt: *"Write a professional WhatsApp invoice template for a grooming service including itemized services, GST line, and payment due date."*

03

3-Tier Pricing Prompt

Prompt: *"Create a 3-tier pricing table for [your service] with names, prices, and feature lists. Highlight the middle tier as RECOMMENDED."*

04

Payment Confirmation

Prompt: *"Write a WhatsApp confirmation message sent automatically after payment is received, including booking summary and next steps."*

Step 2 — Support (8 Minutes)

Build the post-sale support layer: FAQ automation, complaint handling scripts, a feedback survey, and voice support configuration.

Post-Sale FAQs

Prompt: *"Generate 10 post-booking FAQs for a pet grooming service with AI-ready answers covering timing, preparation, and aftercare."*

Complaint Script

Prompt: *"Write an empathetic complaint-handling script for a dissatisfied customer, escalating from AI response to human handoff if unresolved."*

Feedback Survey

Prompt: *"Create a 5-question post-service WhatsApp survey to collect NPS and service quality feedback. Keep it conversational."*

Voice Support Config

Prompt: *"Configure a voice AI persona for [Business Name] — define tone, fallback phrases, and escalation triggers for phone support."*

Steps 3 & 4 — Ops & E2E Test (10 Minutes)

Step 3 — Operations (5 Min)

Build your internal playbook so your team (or AI) can run the business without you.

- Prompt: *"Create a new staff onboarding guide for [role] in 10 steps."*
- Prompt: *"Write SOPs for daily opening, service delivery, and end-of-day closing."*
- Prompt: *"Draft service scripts for greeting, upselling, and farewell for front-desk staff."*

Step 4 — End-to-End Test (5 Min)

You are now the customer. Walk through every touchpoint you have built — as if it is your first time experiencing the business.

- Visit your **website** — does it load and convert?
- Trigger the **AI chat** — does it respond correctly?
- Click the **CTA** — does booking flow smoothly?
- Complete a **payment** — does confirmation arrive?
- Call **voice support** — does it handle your query?
- Send a **WhatsApp** message — does AI reply?

Review Rubric: Scored Out of 25

Each of the five dimensions is worth 5 points. A score of 20+ means your business is production-ready. Use the rubric during peer review — evaluate a partner's build as rigorously as your own.

Dimension	What Is Evaluated	Max Score	Your Score
💳 Payment	UPI link live, invoice template complete, 3-tier pricing deployed, confirmation message active	5	
🎧 Support	FAQs automated, complaint script ready, feedback survey configured, escalation path defined	5	
🎙️ Voice	Voice AI persona configured, tone consistent, fallback phrases set, escalation triggers active	5	
⚙️ Ops	Onboarding guide written, SOPs complete, service scripts drafted and ready to deploy	5	
🔄 E2E Test	Full customer journey tested across all 6 touchpoints with no broken handoffs	5	

Score **20–25**: Production-ready. Score **15–19**: Strong foundation, minor gaps. Score **below 15**: Revisit the broken touchpoints before closing.

All 7 Modules Complete 🎉

You have built a fully operational, AI-powered business from scratch — with discovery, booking, payments, support, and operations all live and connected.

Modules 1–3

Foundation: Identity, Website, AI Chat

Modules 4–6

Growth: Booking, Voice, WhatsApp

Module 7

Revenue: Payments, Support, Ops

Up next: Closing session — key takeaways, next steps, and how to scale your AI business beyond the workshop.
