Key Principles — Build Every Brand This Way

The process you followed today is repeatable for any venture, in any category. These three principles make the difference between a forgettable brand and one that converts customers.

1. Voice Before Visuals

Always define your brand personality in 3 words before generating a logo. The visual identity should *express* the voice — not the other way around. If your logo looks luxury but your copy sounds budget, customers feel the disconnect.

2. Consistency Is the Brand

One brilliant post doesn't make a brand. The words you ALWAYS use and NEVER use are guardrails. Share your brand voice guide with every team member, freelancer, and AI tool you use going forward.

3. Legal Docs Protect You — Use Them

The Terms of Service and Privacy Policy you generated today are starting drafts. Have a lawyer review them before you go live. But starting with a solid AI-generated draft saves Rs. 10,000–30,000 in legal fees.
