Module 6: The Voice of Your Business

Build a fully operational AI-powered call center — inbound, outbound, and messaging — in under 25 minutes. No technical background required.

2:00 – 2:50 PM

MODULE 6 OF 10

Session Roadmap

This 50-minute module is structured in three precise segments. Know where you are at all times.

I Demo

15 minutes

Watch a live AI phone call. Understand what you're building before you build it.

You Build

25 minutes

Follow step-by-step instructions to create all three AI agents in osmTalk.

We Review

10 minutes

Self-grade your agents. Peer feedback. Instructor live-tests two agents on speakerphone.

What We're Building — Three AI Agents

By the end of this module, your business will have a 24/7 voice and messaging presence. Here are the three agents you will deploy today.

📞 Agent 1 — Customer Agent

Inbound Voice

- Answers your business phone 24/7
- Books appointments & answers FAQs
- Handles complaints professionally
- Transfers to you when needed
- Speaks 70+ languages

🎯 Agent 2 — Recruiter Agent

Outbound Voice

- Calls job candidates automatically
- Introduces your company & role
- Asks 5 structured screening questions
- Scores and auto-ranks applicants
- Records every response

💬 Agent 3 — WhatsApp Agent

Messaging

- Greets every new WhatsApp message
- Answers FAQs instantly
- Nurtures leads: Day 1, Day 3, Day 7
- Uses same knowledge base as phone agent
- Zero manual effort required

✓ All three agents are built in 25 minutes using osmTalk. No coding. No developers. No waiting.

LIVE DEMO

Your Phone Is About to Ring

The instructor will now call a pre-configured osmTalk voice agent on speakerphone. Listen carefully — this is exactly what you will build.

Demo Script — Follow Along Live

INSTRUCTOR ACTION: Pick up your phone. Dial the pre-configured osmTalk voice agent on SPEAKERPHONE. Project the audio for the room to hear.

Step 1 — Book an Appointment

You say: *"Hi, I'd like to book a grooming session for my dog."*
AI responds naturally — asks breed, service preference, and preferred date. Listen for how it handles follow-up questions.

Step 2 — Ask About Pricing

You say: *"How much is a full grooming?"*
AI retrieves pricing from the knowledge base and responds accurately. Note the conversational delivery — not robotic.

Step 3 — Switch to Hindi

You say: *"Can we do it in Hindi?"*
AI switches to Hindi seamlessly mid-conversation. No restart. No delay. Full fluency in a new language instantly.

> "That agent handles 10,000 calls simultaneously. Works 24/7. Speaks 70 languages. Never calls in sick. Never asks for a raise. **Now you are going to build one.**"

Deep Dive — Customer Voice Agent Configuration

Configure five areas in osmTalk before making a single call. Each setting below is required — do not skip any.

Core Setup

01

Voice Selection

Listen to samples. Pick one that matches your brand: professional, warm, or energetic.

02

Languages

Start with English + Hindi. Add your regional language as a third option.

03

Greeting Script

"Thank you for calling [Brand Name]. I am [Agent Name], your AI assistant. How can I help you today?"

04

Escalation Rule

If caller says "speak to a human" OR agent fails after 2 attempts → transfer to YOUR number.

5 Call Scenarios to Configure

1 — Service Inquiry

Describes services and pricing pulled directly from knowledge base.

2 — Booking

Asks for name, preferred date/time, and service. Confirms the appointment.

3 — Pricing

Shares pricing tiers. Offers free consultation for custom quotes.

4 — Complaint

Acknowledges. Apologizes. Logs details. Promises callback within 24 hours.

5 — Location / Hours

Shares address or: "We operate online, available 24/7."

Deep Dive — Recruiter Agent Script

This script is used verbatim by your AI agent. Every call is scored out of 10. Candidates are auto-ranked in the dashboard — no manual review needed.

1 **Opening**

"Hi, is this [Candidate Name]? I am calling from [Brand Name]. We received your application for the [Position] role. I'd like to ask a few quick questions. Do you have 5 minutes?"

2 **Q1 — Experience (0–3 pts)**

"Can you tell me about your relevant experience for this role?"

3 **Q2 — Motivation (0–2 pts)**

"Why are you interested in this role at [Brand Name]?"

4 **Q3 — Availability (0–2 pts)**

"Are you available to start within the next 2 weeks?"

5 **Q4 — Salary (0–2 pts)**

"What are your salary expectations for this position?"

6 **Q5 — Candidate Questions (0–1 pt)**

"Do you have any questions about the role or our company?"

7 **Closing**

"Thank you for your time. We will review your responses and get back to you within 3 business days."

Total: 10 points per candidate. The agent auto-ranks all applicants in your osmTalk dashboard by score. Review the top 3 first.

YOUR TURN — 25 MINUTES

Build Your Voice AI Suite

Follow the four-part exercise exactly as written. Each part has a strict time allocation. Stay on pace — the instructor will call time at each transition.

Part A — Customer Voice Agent (8 min)

Open osmTalk dashboard before starting. Have your brand name, phone number, and Module 5 knowledge base file ready.

1 Create the Agent

Dashboard → New Voice Agent → Name it: *"[Brand] Customer Line"*

2 Select Voice & Languages

Listen to 2–3 voice samples. Pick the best brand fit. Set languages: English + Hindi + your regional language.

3 Write the Greeting

Enter exactly: *"Thank you for calling [Brand Name]. How can I help you today?"*

4 Configure 5 Scenarios

Add all five call scenarios: service inquiry, booking, pricing, complaint, and location/hours.

5 Upload Knowledge Base & Set Escalation

Upload Module 5 FAQs + services + pricing file. Set escalation to transfer to YOUR personal phone after 2 failed attempts.

6 Test Live

Call the assigned number from YOUR phone. Have a full conversation. Write your inbound number in your workbook: _____

Part B & C — Recruiter + WhatsApp Agents

Part B — Recruiter Agent (8 min)

01

Create Outbound Agent

New Outbound Voice Agent → Name: *"[Brand] HR Recruiter"*

02

Enter Opening Script

Copy the opening script verbatim from the previous slide.

03

Add 5 Screening Questions

Enter each question with its scoring criteria (0–3 pts for Q1, 0–2 pts for Q2–Q4, 0–1 pt for Q5).

04

Enable Recording

Turn ON call recording and response summary. This creates your candidate review file automatically.

Part C — WhatsApp Agent (5 min)

01

Connect WhatsApp

Go to WhatsApp integration in osmTalk. Connect your WhatsApp Business number or use the provided test number.

02

Set Auto-Greeting

Enter: *"Hi! Thanks for messaging [Brand Name]. I can help with: service info, booking, pricing, or support. Just type what you need!"*

03

Configure FAQ Responses

Connect the same knowledge base used for the phone agent. Day 1, Day 3, Day 7 follow-up sequences will auto-activate.

04

Test It

Send a WhatsApp message to the assigned number. Confirm the greeting and at least one FAQ response fires correctly.

Part D — Peer Test (4 min)

The most important 4 minutes of this module. You will only hear your agent's weaknesses through someone else's ears.

Step 1 — Exchange Numbers

Share your Customer Agent inbound phone number with your neighbor. Write their number down.

Step 2 — Call Their Agent

Call your neighbor's agent. Ask about services, pricing, and try to book an appointment. Take notes on what works and what doesn't.

Step 3 — Give Honest Feedback

Be specific. "The greeting felt robotic" is useful. "It was fine" is not. Write their feedback in your workbook: _____

⚠ **Do not skip the peer test.** If your agent fails a real caller, you lose that customer. Find the gaps now — not in production.

Review — Self-Grade Your Agents (10 min)

INSTRUCTOR: Call 2 participants' voice agents live on speakerphone. Project the audio. Everyone in the room listens and evaluates together.

Rate yourself honestly on each dimension. Total score reflects your agent's readiness for real callers today.

Evaluation Criterion	Your Score	Max Score
Greeting is professional, warm, and natural	___	5 points
Handles customer inquiries effectively without confusion	___	5 points
Captures caller information correctly (name, date, service)	___	5 points
Multilingual readiness — responds fluently in 2+ languages	___	5 points
Recruiting script is complete, scored, and recorded	___	5 points
Module 6 Total	**___**	**25 points**

Score 20–25: Agent is production-ready. **Score 15–19:** Revisit the weakest scenario tonight. **Score below 15:** Rebuild the greeting and re-test before Module 7.

What You Built in 25 Minutes

Step back and recognize what you have just deployed. This is infrastructure that previously required a team and months of setup.

10K

Simultaneous Calls

Your agent handles 10,000 calls at the same time without queuing or hold music.

70+

Languages Spoken

Switch mid-call, mid-conversation. Your agent never says "I don't speak that."

24/7

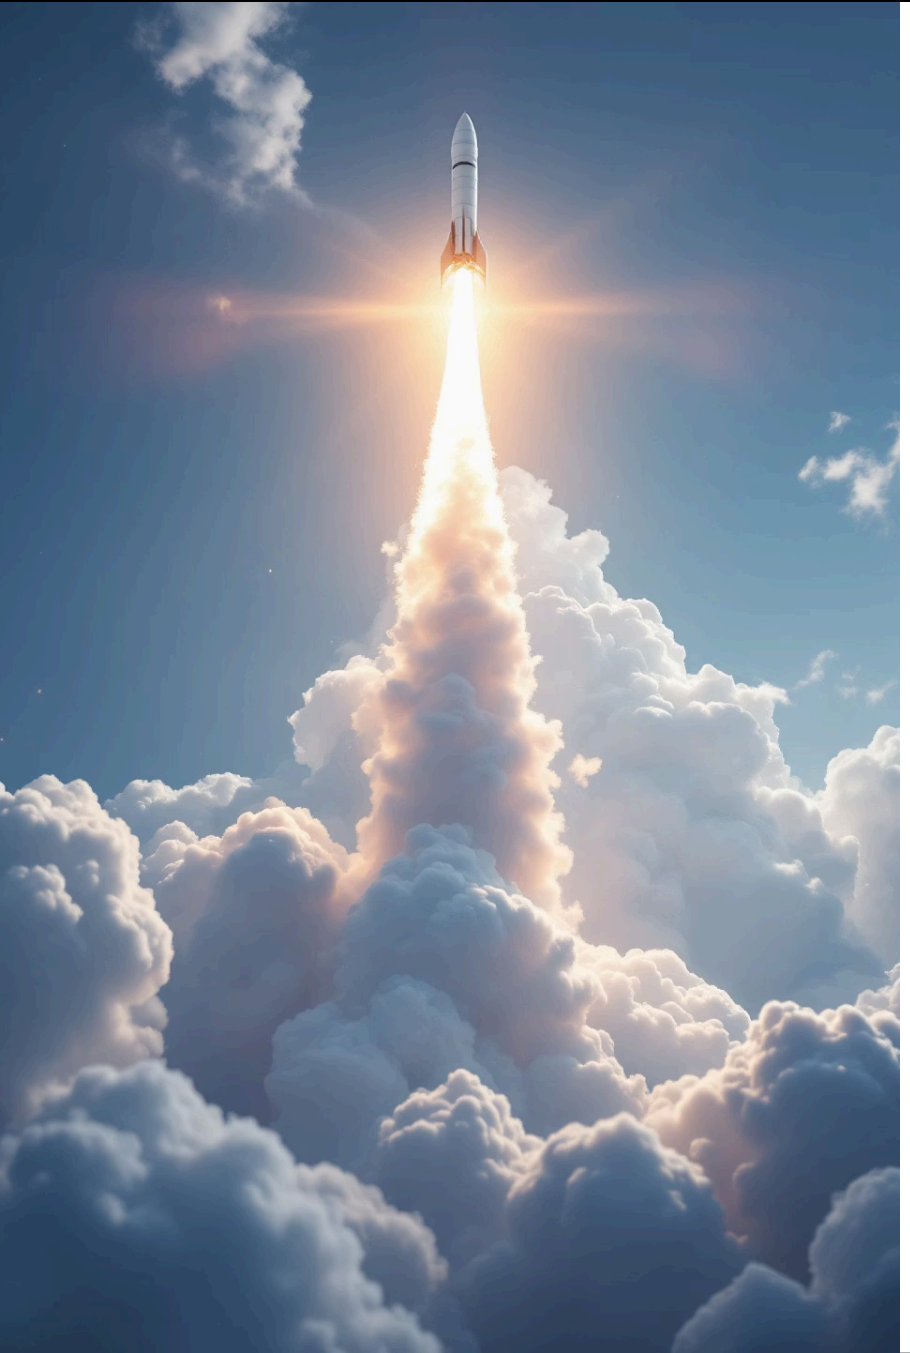
Always On

No sick days. No overtime pay. No missed calls at 2 AM or on public holidays.

3

AI Agents Live

Inbound voice, outbound recruiting, and WhatsApp messaging — all active and integrated.



UP NEXT

Module 7 — Growth Engine

You now have a fully operational AI call center. **Module 7 builds the machine that fills it with customers.** You will set up automated lead generation, multi-channel outreach sequences, and a pipeline dashboard — so your agents are never waiting for the phone to ring.

Open your workbook to Module 7. Have your target customer profile and current lead sources ready to reference.

✅ Module 6 Complete

Customer Agent, Recruiter Agent, and WhatsApp Agent — all live and tested.

🚀 Module 7 Starts Now

Automated lead generation pipelines. Multi-channel outreach. Customer acquisition on autopilot.
