Module 8: Show Me the Money + Operations

Time Block: 3:50 – 4:40 PM | 🎬 I Demo: 15 min | 🛠️ You Build: 25 min | ✅ We Review: 10 min

This is the final build module. After this session, every step of your customer journey — from discovery to payment to post-sale support — will be fully automated and branded.

Module 8 Overview

What We're Building — Closing the Loop

This module completes your business infrastructure. Three systems. One outcome: a fully automated, end-to-end revenue and operations engine.

💳 Payments

- UPI payment links + QR codes
- Branded GST-compliant invoices
- 3-tier pricing strategy
- WhatsApp payment confirmations

🤝 Support

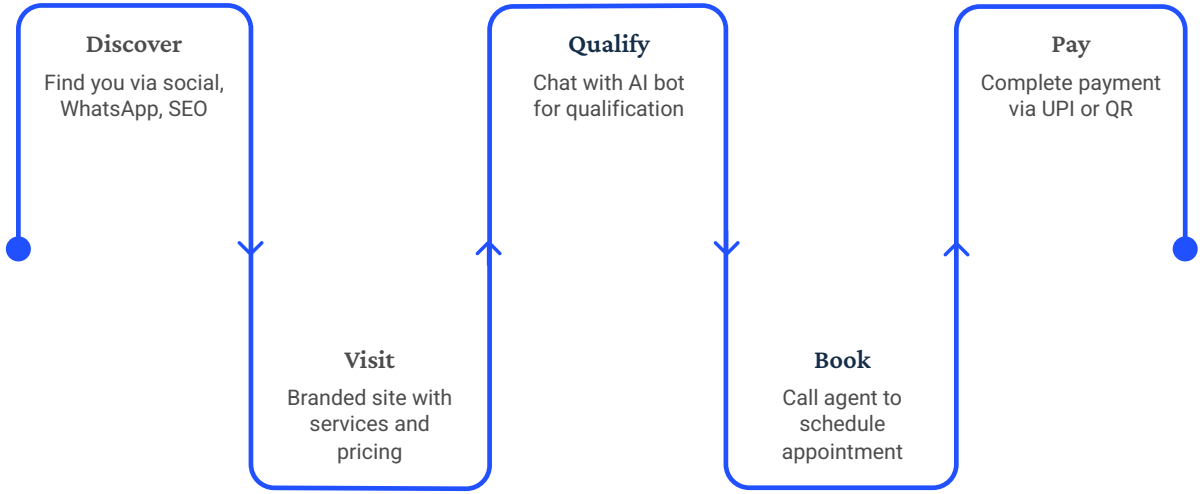
- Post-sale chatbot scripts
- Voice support for complaints
- L1 → L2 → L3 escalation matrix
- Feedback collection flow

⚙️ Operations

- Employee onboarding guide
- SOPs for top 3 services
- Customer service scripts
- Referral and follow-up flows

The Complete Business Loop

Every module you've built connects into a single, unbroken customer journey. Here is your end-to-end automated business — fully operational after today.



Every step automated. Every step branded. Every step built by you today.
This is not a prototype — this is a live, revenue-generating business.

Pricing Strategy

Real-World 3-Tier Pricing Example

Generated by **osmAgent** for PawPalace. The Standard tier is always the largest — this is where **60–70% of your revenue** will come from. Mark it RECOMMENDED.

BASIC — "Fresh & Clean"

Rs. 799

Bath, blow dry, nail trim, ear cleaning.

For: price-conscious customers who want the essentials.

⭐ RECOMMENDED

STANDARD — "The Full Groom"

Rs. 1,499

Everything in Basic + haircut, teeth brushing, paw moisturizing, cologne finish.

For: most customers. Best value. This is your anchor tier.

PREMIUM — "Spa Royale"

Rs. 2,499

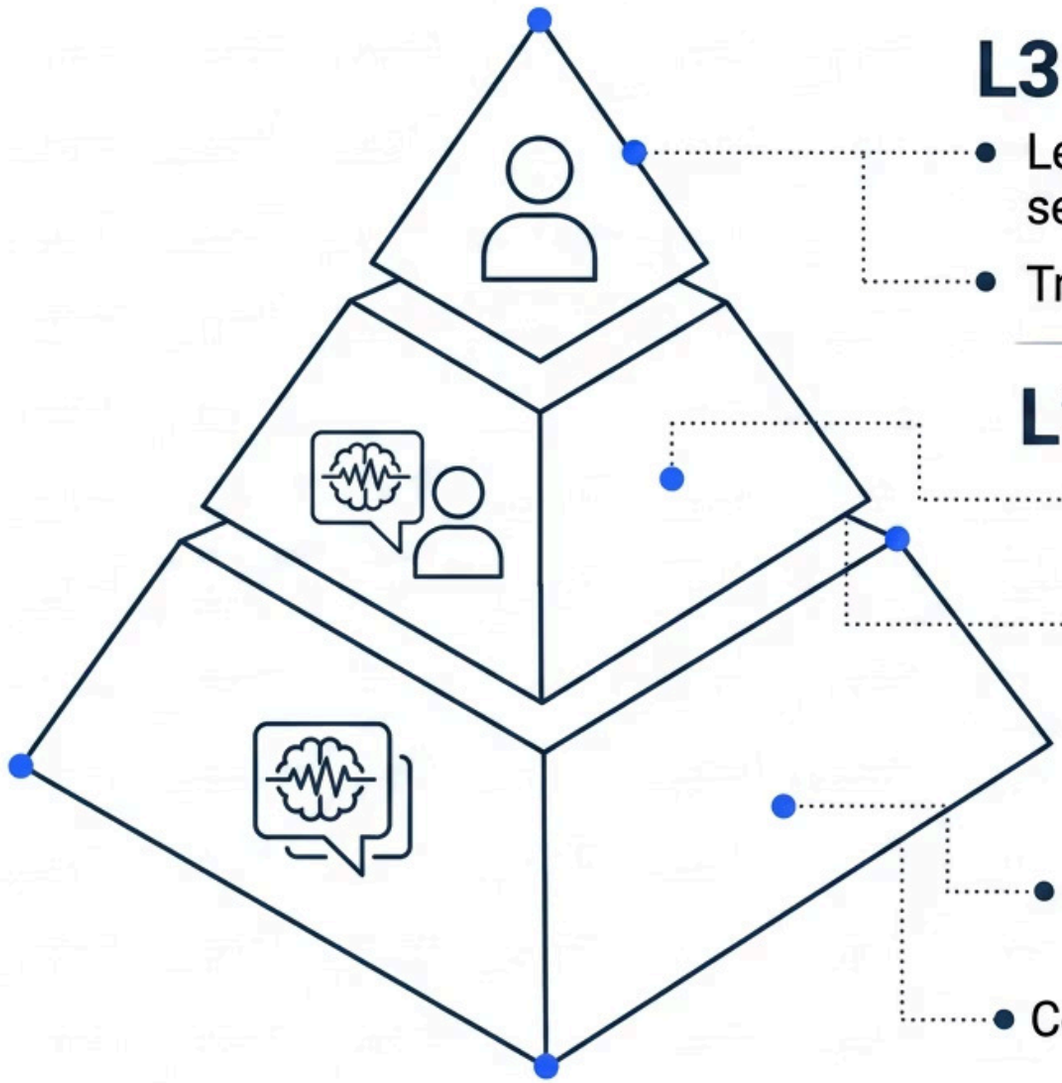
Everything in Standard + de-shedding, aromatherapy, premium shampoo, photo session, treats.

For: customers who want the absolute best for their pet.

Support Infrastructure

Support Escalation — Who Handles What

Your AI handles the overwhelming majority of customer interactions. You focus only on the cases that genuinely require a human touch.



L3 Human Only (5%)

- Legal issues, major failures, VIP customers, sensitive complaints
- Transferred directly to you or your team lead

L2 AI + Human Review (15%)

- Complaints, refund requests, complex issues, custom orders
- AI logs and attempts resolution, flags for human review if unresolved

L1 AI Handles (80%)

- FAQs, order tracking, appointment scheduling, payment status, general questions
- Cost: near zero | Speed: instant | Available: 24/7

Your AI handles **80% of all inquiries** at near-zero cost. You focus on the **20% that truly needs a human** — high-value, high-sensitivity situations only.

🎬 I Demo — 15 Minutes

Watch Me Set Up Payments + Support

Follow along in **osmAgent** and **osmTalk**. Do not build yet — observe the full flow first, then you will replicate it.

Step 1 — Payments in osmAgent

I will type these exact prompts live. Watch what gets generated.

1. Invoice template prompt (see next card)
2. 3-tier pricing strategy prompt
3. WhatsApp auto-confirmation setup

Step 2 — Support in osmTalk

I will configure the chatbot knowledge base live with:

1. Post-sale FAQs and refund policy
2. Appointment cancellation handling
3. Complaint acknowledgment flow
4. 1–5 star feedback survey trigger

Demo Prompts — Copy These Exactly

The Exact Prompts I'm Using

These are the prompts you will use in your own exercise. Watch me run them first, then you will adapt them for your brand.

Invoice Template Prompt

"Create a professional invoice template for PawPalace with: company logo, company name and address, GST number placeholder, service description table, GST calculation (CGST + SGST), payment terms due within 7 days, UPI payment QR code placeholder, bank details placeholder, thank you message in brand voice."

3-Tier Pricing Prompt

"Suggest optimal pricing for PawPalace's 5 grooming services. Create 3 tiers: Basic (essentials), Standard (most popular, mark as RECOMMENDED), Premium (luxury spa). Include what each tier includes, price in INR, and why a customer would choose it."

Support Knowledge Base Prompt

In osmTalk, update chatbot with: "What is your refund policy?" / "I want to cancel my appointment." / "I have a complaint about my last visit." / "Rate your experience 1–5." Then configure: acknowledge → apologize → investigate → resolve → follow up.

🛠️ You Build — 25 Minutes

Exercise: Revenue & Ops Engine

Work through all 4 steps in sequence. Use the exact prompts provided — only replace **[YOUR BRAND]** and **[YOUR SERVICES]** with your own details.

1

Payments — 7 min

Generate invoice template + 3-tier pricing + WhatsApp payment confirmation auto-message in osmAgent and osmTalk.

2

Support System — 8 min

Build post-sale chatbot knowledge base with FAQs, complaint scripts, and 1–5 feedback survey. Update voice agent escalation trigger.

3

Operations Docs — 5 min

Generate employee onboarding guide, top 3 service SOPs, and customer service scripts for inquiry, follow-up, complaint, payment, and referral.

4

End-to-End Test — 5 min

Walk the full customer journey yourself. Use the 7-checkpoint checklist. Write down every issue you find.

Step 1 — Payments (7 min)

Build Your Payment Infrastructure

Complete all 4 actions in order. Use these exact prompts — replace placeholders with your brand name and service list.

1 Generate UPI Payment Link

In osmAgent, generate a UPI payment link for your primary service. Set amount, merchant name, and reference code.

2 Invoice Template

Type EXACTLY: *"Create a professional invoice template for [YOUR BRAND] with: company logo, company details, GST number placeholder, service table, payment terms, UPI QR code placeholder."*

3 3-Tier Pricing

Type EXACTLY: *"Suggest optimal pricing for [YOUR SERVICES] based on Indian market rates. Create 3 tiers: Basic (entry-level), Standard (recommended, best value), Premium (all-inclusive). For each: what is included, price in INR, why a customer would choose it."*

4 WhatsApp Payment Confirmation

In osmTalk, configure auto-message: *"Payment received! Thank you for choosing [Brand]. Your [service] is confirmed for [date]. We will send details shortly."*

Step 2 — Support System (8 min)

Configure Your Post-Sale Support

One master prompt generates all your support content. Paste the output directly into osmTalk.

Type this EXACTLY in osmAgent — replace **[YOUR BRAND]** with your business name:
"Create post-sale support content for [YOUR BRAND]: (1) 10 post-purchase FAQs covering delivery, refund, warranty, usage, rescheduling, cancellation. (2) Complaint handling script: acknowledge, apologize, ask for details, offer resolution, confirm, follow up in 24h. (3) Customer feedback survey: rate 1–5, what did you like, what can we improve, would you recommend us."

After Generating — Do These 2 Things:

1. Paste ALL of the output into osmTalk chatbot knowledge base
2. Update voice agent: add greeting "Thank you for calling [Brand] support. Let me help." + escalation trigger "Let me connect you with a specialist"

What This Creates:

- 10 FAQ auto-responses
- Complaint acknowledgment flow
- Post-resolution follow-up at 24h
- NPS-style feedback collection

Step 3 — Operations Docs (5 min)

Generate Your Operations Backbone

One prompt. Three documents. Your entire operations manual, auto-generated in under 5 minutes.

Type EXACTLY in osmAgent:
"Generate for [YOUR BRAND]: (1) A 1-page employee onboarding guide with company overview, role expectations, tools they use, first week checklist. (2) Standard operating procedures for our top 3 services with step-by-step delivery process. (3) Customer service scripts for: handling a new inquiry, following up on a lead, dealing with a complaint, collecting payment, asking for a referral."

📋 Onboarding Guide

Overview, expectations, tools, and a first-week checklist every new hire can follow independently.

📝 Service SOPs

Step-by-step delivery instructions for your top 3 services — consistent quality every time.

🗣️ Service Scripts

Word-for-word scripts for inquiry, follow-up, complaint, payment collection, and referral ask.

Step 4 — End-to-End Test (5 min)

Walk the Full Customer Journey

Be your own customer. Go through every touchpoint and check each box only when it genuinely works. Write down every issue — fix them before Module 9.

01

Visit Your Website

Does it load correctly? Is it mobile-responsive? Does it look professional?

02

Read Services & Pricing

Is the 3-tier pricing clear? Is the RECOMMENDED tier visually prominent?

03

Chat with Your Bot

Ask 3 common questions. Does it answer accurately and in your brand voice?

04

Click CTA / Payment Link

Does the UPI link open? Does the invoice generate correctly with your details?

05

Call Your Voice Agent

Does it answer professionally? Does the escalation trigger work?

06

Send a WhatsApp Message

Do you get an auto-reply? Does the payment confirmation trigger correctly?

07

Overall Judgment

Does this feel like a real, professional business? Would you pay for this service?

Issues to fix: _____

✅ We Review — 10 Minutes

Self-Grade: Module 8 Scorecard

Instructor: Pick 2 participants. Run the FULL live customer journey together: website → chat → call → payment → support. Everyone scores themselves simultaneously.

Evaluation Criteria	Score	What Good Looks Like
Payment flow is clear and fully functional	___/5	UPI link works, invoice generates, QR visible
Support bot handles post-sale inquiries	___/5	FAQs answered, complaint flow triggers correctly
Voice support feels empathetic and professional	___/5	Warm greeting, accurate answers, clean escalation
Operations docs are comprehensive and usable	___/5	Onboarding guide, SOPs, and scripts all generated
End-to-end journey is seamless	___/5	No broken links, no gaps, feels like a real business
Module 8 Total	**___/25**	Target: 20+ to proceed to Module 9

All 8 Building Modules: COMPLETE

Your venture is built. Every piece is in place — brand, website, chatbot, voice agent, payments, support, and operations. This is a fully functional, automated business.

1 **Modules 1–3**
Foundation: vision, brand identity, market positioning

2 **Modules 4–6**
Infrastructure: website, chatbot, voice agent

3 **Modules 7–8**
Revenue: acquisition, payments, support, operations

4 **Module 9 →**
Launch: final scoring + your 7-day go-live plan

Next: Module 9 — Closing, final scoring, and your 7-day launch plan. Come ready with your Module 8 scorecard and your list of issues to fix.
